

LAR (Lift Away Rail)

Manufactured from stainless steel the LAR is a rail that lifts away when not in use. 875 mm long.

Note

- The LAR has been test loaded to 1,100N (approx. 110 kg) without failure or deformation.
- The load on the upper pair of wall fixings is 5,500N (Approx. 550 kg).
- Ensure that the fasteners (masonry, anchors, screws, etc) and the wall structure can withstand the load.

SL (Drop Down Support Leg)

Manufactured from stainless steel the SL reduces the load placed on the wall. 790 mm long.
